DETAILED ACTION

Allowable Subject Matter

1. **Claims 9-14, 18, 21-36** are allowed.
2. The following is an examiner's statement of reasons for allowance: None of the references teach or fairly suggest a first node connected to the first electrode of the capacitor; a second node connected to the second electrode of the capacitor; a third node for receiving an output signal from the operator; a first switching element provided between the second node and the third node; a second switching element provided between the first node and the input-side node of the operator; a third switching element provided between the first node and the output-side node; and a fourth switching element provided between the third node and the output-side node, as recited in **claims 9 and 11**. None of the references teach or fairly suggest a plurality of buffers, each buffer coupled to each branch reference voltage wire and outputting an output voltage in response to the reference voltage transmitted by each branch reference voltage wire and capable of preventing an electric current from flowing via each branch reference voltage wire, as recited in **claims 18 and 23**. Specifically while the teaching of Sasaki and APA teaches most of the claimed limitations including there fails to be any teaching of each buffer connected to each branch reference voltage wire preventing the current from flowing to each branch reference voltage wire.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
